

# Definitions

## **Additional Technical Activities**

Implementation of workload automation, environment monitoring, security and overall technical support of testing activities.

## **Communications Development & Delivery Support**

Preparing the location for deployment through relevant, clear and targeted engagement, program updates, communications and temporary local communication assistance.

**Data Conversion** Moving required data from legacy database into a new database.

**Functional Unit Testing** Validating that the designs and requirements have been coded accurately.

**Parallel Testing** Verifying that the UCPath system can produce an accurate payroll.

## **Remaining Design, Build Unit Test**

**(ACA, Reports)** Designing test conditions and scenarios, assigning participants and developing metrics.

**Shared Services** Preparing the IT service desk teams to support the UCPath Program.

## **SIT (System Integration Testing)**

**Execution** Testing the functionality and verifying the flow of data between UCPath and other UC systems or external entities (e.g. banks, benefit vendors, taxing agencies).

## **SIT (System Integration Testing)**

**Preparation** Designing test conditions and scenarios and developing success metrics

**Test Planning** Designing test conditions and scenarios and developing success metrics.

**Training Delivery** Training all identified UC and UCPath Center groups.

**Training Development** Creating training and documentation for each identified group of UC employees.

## **Training Strategy and Planning**

Conducting user analysis and needs assessment, designing strategy and creating training plans to prepare employees to work with UCPath.

## **Transition and Deployment Preparation**

Centrally coordinating deployment readiness including all planning and execution of the transition.

## **UAT (User Acceptance Test) Execution**

Testing the end-to-end business flow with hand offs between UCPC, UCOP and UCLA the people who will actually be working in the system

## **UAT (User Acceptance Test)**

**Preparation** Designing test conditions to validate future state process design and developing success metrics.
